Using your Sunbeam Deep Fryer Compact continued

Cooking in your Deep Fryer Compact

There are two methods of cooking in your fryer; one general method for most foodstuffs and another for home battered products.

Note: During cooking, steam will build up in the fryer, so when lifting the lid use a kitchen glove or mitt to protect your hand.

General cooking method

(For pre-cooked, crumbed, floured or wrapped food.)

1. Adjust the control dial to the desired temperature. The red temperature indicator light will illuminate.
2. When the oil has reached the required temperature, the light will go out. Remove the lid, lift the basket and put it on the rest ④ so that it is not in contact with the oil. Place the food, (should be as dry as possible) into the raised basket.

Note: The basket should always be in the raised position when it is to be filled with food.

3. Lower the basket into the tank and replace the lid.

4. When the food is cooked (see time guide chart on page 9), place the basket on its raised position to drain for a few seconds.
5. Remove the basket and put the fried food on a plate covered with absorbent paper or kitchen towel.
6. When finished with the fryer, slide the temperature knob to the lowest setting and switch the power off. Remove the plug from mains power.
7. Clean the fryer only after the oil is completely cooled down.

Cooking home battered food

This method allows for the fact that if wet batter is placed in the basket prior to cooking the food may stick to the basket. This method of cooking requires extreme care.

1. Adjust the control to the desired temperature. The red temperature indicator light will illuminate.
2. When the oil has reached the required temperature the light will go out.

Note: Leave the basket in the down position.

3. Remove the lid of the fryer.
4. Coat the food in batter and allow it to drain slightly to get rid of the excess coating.
5. Very carefully, slowly lower the coated food into the hot oil, using a suitable implement or tongs. This allows the batter to become solid and prevents it sealing to the mesh of the basket.

Note: Remember to take care as the oil may spit as the food is added.

You can now follow the instructions as given in the general cooking method, steps 4 - 7.

Hints for perfect frying

1. Never use the fryer without oil.
2. Always use the best quality oil possible. We recommend corn, nut, seed or vegetable oils. Never use butter, margarine or olive oils.
3. Avoid mixing oils of different qualities or types.
4. Change the oil when it becomes brown or milky in colour.
5. Take into account the food to be cooked before setting the frying temperature. As a general guide pre-cooked food will need a higher temperature than raw food, and the larger the individual items the lower the temperature should be.
6. Large pieces of food should not be deep fried, as they take too long to cook therefore absorbing too much oil.
7. Fry small amounts at a time, adding too much at a time will decrease the oil's temperature and increase the chance that food will stick together.
8. Make sure that food is dry before frying, wet food will splatter.
9. Always dry or roll wet food in flour before coating in a batter. Otherwise the extra steam created will separate the coating from the food.

Care and Cleaning

Care and Cleaning

Cleaning should only be carried out when the fryer is switched off and the plug removed from the socket. Your fryer should have completely cooled.

Lid

Your Deep Fryer Compact features an easy to clean lid. Either put the entire lid into the dishwasher or into hot soapy water and let it soak there for 5-10 minutes. Shake the remaining water out of the lid and let it dry.

Basket, handle and oil tank

The basket and its handle can be hand washed in warm soapy water. It should be thoroughly dried afterwards. When the oil has completely cooled, the tank of your fryer is to be cleaned following these instructions:

1. Carefully pour old oil into a suitable container and dispose of properly.
Note: Never pour used oil down sink.
2. Wipe out remaining oil and waste with paper towelling.
3. Fill oil vessel with a small amount of hot soapy water and clean with a non abrasive sponge. Pour out water and carefully rinse inside with fresh water.
4. Wipe exterior of unit with a clean cloth.

DO NOT SUBMERGE WHOLE UNIT IN WATER.

DO NOT ALLOW POWER CORD TO GET WET.

Note: You may store your filtered oil in the fryer if you make sure that it is covered by the lid.

The Perfect Chip

- For perfect fries and wedges, old potatoes are ideal. The potato should be of a low starch, waxy variety i.e. Sebago, Russet Burbank, Spunta, King Edward, Bintje.
- Make sure that the chips are cut to even size to guarantee even cooking.
- The cut chips should be rinsed under running water until the water runs clear. This removes excess starch from the potatoes, the starch burns at high temperatures.
- Dry on kitchen towel before frying.
- Shake the basket at short intervals to encourage even browning and to stop chips sticking together.
- Homemade fries are double cooked. The first fry blanches the chips so that they cook through. The second fry colours the chips and gives them a crisp crust. Use the table below as a guide.

- Cooking times will vary depending on the size of your fries or chips and the variety of the potato used.

PLEASE NOTE: If cooking homemade raw potato chips, it is recommended that the minimum oil level is used.

Hints for cooking the perfect frozen chip.

- Do not defrost frozen pre-cooked chips. For the best results they should be taken directly from the freezer to the fryer.
- Heat oil to the maximum setting, 190°C.
- For best results for frozen chips refer to chip packet.
- Allow chips to drain for a moment before removing from the basket and seasoning.

	1ST FRY (BLANCH)		2ND FRY	
Thin fries - french fries	140°C	5 min	190°C	5 min
Thick chips	140°C	7-8 min	190°C	7-8 min
Wedges	140°C	10 min	180°C	10 min

Allow oil to heat up to 2nd temperature before re-immersing the basket in the hot oil.
